

Proteomics Facility

Discovery Studio

Discovery Studio (DS) is Accelrys' comprehensive predictive science application for the proteomics study. DS can be used to investigate and test hypotheses In-Silico prior to costly experimental implementation, thus reducing the time and expense involved in bringing products to market. It drives scientific exploration from target identification to lead optimization with a range of protein size for the modeling and molecular dynamics simulation. It is highly optimized for the high-through put screening with macromolecule against a large database.
